

New Komatsu PC40MR-2 Compact Excavator Offers Improved Productivity & Operator Comfort

- *Near-zero tight tail swing for increased production in confined areas*
- *HydraMind™ Hydraulic System improves power and performance*
- *Upgraded operator environment for maximum comfort*

Komatsu Utility introduces the new PC40MR-2 compact hydraulic excavator for contractors in a variety of construction, utility, landscaping and other small to mid-sized applications. Designed to offer increased production and added operator comfort, the new PC40MR-2 has many of the productivity features of a full-sized excavator, while still providing a compact package that is ideal for operating in confined areas.

Upgraded Operator Comfort

For improved comfort, the PC40MR-2's operator compartment has been expanded to facilitate easier entry and exit and provide more room for operating the machine's foot pedals and joystick controls. The machine also offers two styles of Roll-Over Protective Structures (ROPS), one of which

features a cantilever design, two rear-mounted posts and an overhead canopy that offers complete visibility. Cabs with optional air conditioning are also available.

Increased Power & Performance

With an operating weight of 10,560 lbs. and a Komatsu 4D88E-5 engine operating with 39.4 HP at 2,350 rpm, the PC40MR-2 has increased strength and wider working ranges to enhance overall operating performance. The machine features Komatsu's patented HydraMind™ hydraulic system, which increase power and performance by utilizing an engine speed sensing system. For more information on the new PC40MR-2, call your Anderson sales representative today!
