

POWERLATCH™

Hydraulic Excavator Coupler

This coupler is based on a time-tested platform and offers safety, quality and reliability in a product that will last. As the name suggests, it provides the power to carry out a range of tasks in the same day with the same machine.

The JRB PowerLatch™ by Paladin comes with a JRB **machine- specific** wet kit for fast and easy install. Connection is made at the bucket cylinder, not the main hydraulic tank, providing full system pressure to secure the attachment. Up to 30% less install time compared to competitive universal kits!

Other Coupler Advantages:

- Reduced Offset
- Dual-Pin Locking
- Lighter, Cast Design
- Centered Lifting Eye
- Multiple Pin pick up
- Great for Hammers & Compactors
- Optional Audible Alarm

Easy Attachment Process

Step 1:

Grab near attachment pin

Step 2:

Curl attachment and lock coupler

Step 3:

Perform ground test; ready to use!

MULTI-PIN GRABBING EXCAVATOR COUPLER

POWERLATCH™

The PowerLatch™ has a secondary mechanical backup system in place that is completely independent of the hydraulic circuit which locks on both the front and rear attachments pins to ensure that they remain securely attached in the event of a loss of hydraulic pressure.

Multi-pin grabbing coupler advantages:

- Universal design picks up buckets and attachments compatible with the world's best known machine manufacturers.
- Fully automatic, allowing quick and efficient changeover.
- Operates with a variety of attachments, including hammers, compactors, rippers, demolition attachments and has an integrated center lifting eye.
- Greater flexibility by working in both backhoe and face positions.

Works in Shovel or Face Mode

Centered Lifting Eye

Specifications

Class	Part Number	Weight (lbs)
20	20MPL	205
25	25MPL	397
35	35MPL	580
