

SG SORTING GRAPPLES

LARGE CAPACITY FOR SHORTER LOGS

EASY TRUCK UNLOADING

Rockland SG Sorting Grapples unload trucks from the top down. The tines and clamp are designed to quickly grab a grapple full by reaching around both sides of a load. This unique ability really makes truck unloading and log handling a lot easier for both the operator and the machine. Optional kickers are available for high-stack applications.

BUILT TO LAST

SG Sorting Grapples are built tough and designed for years of dependable service. These features guarantee performance you can depend on: rugged, high-strength steel construction; wide clamp pivots with sealed, replaceable bearings; case hardened pins; heavy-duty hydraulics; clamp cylinders equipped with chrome-plated, induction hardened cylinder rods.

INSTALLATION INFORMATION

All Rockland SG Sorting Grapples mount in place of the standard bucket using factory pins or specified coupler brackets. SG Sorting Grapples are complete with jumper hoses to connect to the standard boom arm piping. The loader must be equipped with a three-spool valve and boom arm piping. A four-spool valve is required for the kicker option.

WARRANTY

Rockland Sorting Grapples are guaranteed against failure due to defective design, materials or workmanship for a period of two years or 4000 hours.
