Creep Mode

The completely redesigned TL8R2 is powerful and efficient and engineered to provide excellent performance, durability, and value. Standard features include two-speed travel, pilot operated joystick controls, a large color multi-informational display, and quiet ride track system. The TL8R2 has a spacious cabin with an automotive styled interior that includes a deluxe high back suspension seat, electronic throttle control, rocker switches for a wide variety of machine functions, 12 volt outlet, and cup holder.

A heavy duty rear door protects vital engine components and swings out to provide access to the high capacity, side-by-side cooling module with coolant sight glass, engine oil filter, engine oil fill and dipstick, fuel/water separator, and dual element air cleaner.

The left rear tower contains the hydraulic tank and filter, and the right rear tower contains the wiper fluid reservoir (cab models) and battery. With the cabin tilted up the primary and secondary fuel filters, DPF, pilot filter, pump group, and control valve can be inspected and serviced as needed.

Creep mode is a standard feature on the TL8R2 models equipped with high flow auxiliary hydraulics. This feature will enable operators to precisely match the forward speed of the track loader to a particular attachment without having to constantly meter the travel lever. Creep mode is ideal for attachments that require a consistent, repeatable travel speed, such as a cold planer and trencher.

Spacious operator's platform with easy to reach controls and switches.
