

Main Pin Mount Thumb

RECOMMENDED APPLICATIONS:

Werk-Brau's Multi-Tined Thumb for Excavators is specifically engineered to aid in handling or loading irregularly shaped objects or debris, logs, rocks, or anything that cannot be handled with a bucket alone. Because it retracts against the stick, it can be left on the machine during normal excavation. This thumb is not recommended for prying. Each thumb has a standard 120 degrees of rotation.

QUALITY CONSTRUCTION:

Each thumb is custom designed to match the tip radius of the bucket it is being paired with. High strength steel is used throughout entire weldment. This thumb features hardened pins, and greasable bushings at all pivot points.

STANDARD SIZES AVAILABLE:

Each unit is custom designed to match the bucket width and tip radius. This information is required when ordering.

ADDITIONAL FEATURES:

Additional tines optional. Rigid and hydraulic versions are available. Special designs are available, please request a quote from a dealer or contact Werk-Brau directly.
